# Quickscribe — RSS Feed and Reader Setup and Installation Instructions

Last updated: October 30, 2006

## What is RSS?

RSS (Really Simple Syndication / Rich Site Summary) is a simple XML-based system that lets users subscribe to websites. Using RSS, webmasters can put their content into a standardized format, which can be viewed and organized through RSS-aware software or automatically conveyed as new content on another website.

Quickscribe uses RSS technology to automatically send you notification when relevant Acts and regulations in our database have been updated. You define what is relevant to you.

For RSS to work, you need to install an RSS Reader.

#### What is an RSS Reader?

An RSS Reader is a program that queries the raw xml news feed from Quickscribe to see if any new amendments have been made to the legislation you identified as relevant. Changes are displayed in the window of your Reader for you to review at your leisure.

There are many RSS readers. We recommend, but do not provide the support for, RssReader.

Do you already have an RSS Reader installed on your computer? If so, skip to Quickscribe RSS Setup.

## Prerequisites

#### Step 1 — .NET installation

You need to have .NET installed on your machine for the RSS Reader to work. If you are not running Windows 2003 or the latest Windows XP version and have never installed the free Microsoft .NET framework, you first need to download and install it.

Before you install the RSS Reader, follow these steps:

- 1. From your Start menu, choose Control Panel
- 2. From the left hand panel, choose **Windows Update**

Control Panel	٢
🤣 Switch to Category View

Windows Update	

#### 3. Choose the Custom button 12

4.

.

Check to see if you n	omputer up to date eed updates for Windows, your hardware or your devices
Express	Get high-priority updates (recommended)
Custom	Select from optional and high-priority updates for Windows and other programs
Let the autom	atic checking process run
	Welcome to Microsoft Update
Checking for the I	atest updates for your computer

5. Select Software, Optional from the left hand panel

6. If you don't see Microsoft .NET Framework version 1.1 in your list of updates, you already have .Net installed on your machine and can go directly to the Quickscribe RSS Setup section. Otherwise, check the box next to Microsoft .NET Framework version 1.1

<ul> <li>Select and install other updates You can select other updates only after you install, or choose not to below, see the options to the left.</li> </ul>		
Optional software updates		
Microsoft Windows 2000		
🗖 🛨 Root Certificates Update		
□ 🛨 Microsoft .NET Framework 2.0: x86 (KB829019)		
🗖 🖪 Microsoft Base Smart Card Cryptographic Service Provider Pa		
Microsoft .NET Framework version 1.1		

- 7. Click Review and install updates
  - Review and install updates.

8. Then click the **Install Updates** button

Review and Install Updates			
Install Updates	Download size (total): 23.1 MB Estimated time at your connection speed: 2 minutes		

9. Allow the installation process to run

alling Updates	
🚯 The updates are being downloaded and installed	
Installation status:
